PROJECT 02 · APPLAI

PROCESS

User interviews, heuristic evaluation, and usability testing across multi-screen workflows.

KEY FINDING

The companies' hiring practices view resonated most strongly with users. People wanted visibility before they applied, not just a complaint button after something went wrong.

INSIGHT

The most valuable intervention was making systemic information legible so candidates could make informed choices from the start.

PROJECT 03 · PM INTERNSHIP

JOBRAPIDO — SEARCH RESULTS REDESIGN

CONTEXT

PM internship at Jobrapido, a global job search platform.

PROBLEM

Low retention. Users were not coming back.

HYPOTHESIS

The UX was the bottleneck. If we made the search experience meaningfully better, retention would follow.

THREE LEVERS

Filtering · Subscription Flow · UI Redesign
